Testing Details

In-Competition Urine Tests	20
Out-of-Competition Urine Tests	11
Samples tested for ESAs	15
Samples tested for GHRF (GHS/GHRP)	15

Results Details

AAF Findings*	1
Non-Analytical ADRVs	0
* The AAF result was Glucocorticoids/Prednisolone and its metabolites. The athlete had failed to file for a TUE and was subject to a two-year sanction. On the DCF, the athlete mentioned consumption of AminoJect, Musashi Chen, Fexofenadine to heal nettle rash hives, and Prednisolone for allergies treatment. However, as the athlete had been misled by the physician as well as the athlete's support personnel with regard to the TUE explanation, it was decided that there was no malicious cause and therefore, the suspension period was reduced to one year.
